Izon Science Limited provides this document to its customers with a product purchase to use in the product operation. This document is copyright protected and any reproduction of the whole or any part of this document is strictly prohibited, except with the written authorisation of Izon Science Limited.

The contents of this document are subject to change without notice. All technical information in this document is for reference purposes only. System configurations and specifications in this document supersede all previous information received by the purchaser.

Izon Science Limited makes no representations that this document is complete, accurate or errorfree and assumes no responsibility and will not be liable for any errors, omissions, damage or loss that might result from any use of this document, even if the information in the document is followed properly.

Izon products are designed and manufactured under a quality system certified to ISO 13485:2016.

This document is not part of any sales contract between Izon Science Limited and a purchaser. This document shall in no way govern or modify any Terms and Conditions of Sale, which Terms and Conditions of Sale shall govern all conflicting information between the two documents.

FCC Declaration of Conformance

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference
- 2. This device must accept any interference received, including interference that may cause undesired operation. Changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

1 DEFINITIONS AND WRITING CONVENTIONS

This manual contains warnings and precautionary statements to help prevent personal injury and/or damage to the TFF system when properly followed. Safety and special notices, including the symbols described in Table 1, are presented in boxes throughout the guide.

Table 1: Safety and Hazard Symbols

Ç	This symbol indicates general advice on how to improve procedures or recommends measures to take in specific situations.
WARNING	WARNING: Indicates a hazardous situation that could result in death or serious injury if not avoided. Do not proceed until all specified conditions are fully understood and met.
	CAUTION: Indicates a hazardous situation that could result in minor or moderate injury if not avoided. Ensure all specified conditions are fully understood and met before proceeding.

TERM	DEFINITION
мwсо	Molecular weight cut-off
Permeate	The fluid that passes though the filter membrane
qEV	Izon's size exclusion chromatography columns
Retentate	The retained fluid (concentrate)
TFF	Tangential flow filtration

2 SAFETY AND HAZARDS

2.1 Safe Use Requirements and Specifications

Users must thoroughly review the complete User Manual before assembling, setting up, or operating the TFF system, and keep it readily accessible during operation. Operate the system strictly as outlined in the documentation to avoid potential hazards that could result in personal injury or equipment damage. Adhere to the safe use requirements specified in Table 3 below. Using the equipment in an unspecified manner may compromise the protection it provides.

Table 3: Safe Use Requirements and Specifications

SAFE USE REQUIREMENT		SPECIFICATION
Voltage and frequency		110~220 V, 50-60 Hz
Rated power		120 W
Concella	Dimension (W*H*D)	437*388*474 mm
Console	Weight	18.3 kg
	Dimension (W*H*D)	308*87.3*308 mm
Carla	Weight	6.3 kg
Scale	Maximum load weight	20 kg
	Accuracy	±0.5%
Minimum working volume		Tubing dependant
Minimum hold-up volume		Tubing dependant
Maximum system operating pressure		20 psi
Storage and transport temperature range		5 °C to 55 °C
Humidity range for storage and transport		0% to 50%
Operating temperature range		4 °C to 40 °C
Operating humidity range		0% to 90%

Do not attempt to run the TFF outside of these conditions.

Liquid will be in contact with the following materials as it flows through the TFF instrument. Please ensure that the materials listed in Table 4 are compatible with your application.

Table 4: Composition of materials in contact with the liquid

COMPONENT	MATERIALS
Tubing	Platinum cured silicone
Pressure sensor	Stainless steel SUS316
Tri clamp tee	Stainless steel SUS316
Gasket	Silicone
Tri clamp adapter	Polyethylene (PE)
Hose barb fittings	Polypropylene (PP)
Pressure control valve	Stainless steel SUS316

Table 5: Pump Specifications

PROPERTY	VALUE
Pump type	Peristaltic pump
Flow rate	Tubing dependant, max. ~2.2 L/min
Maximum speed	600 rpm
Motor accuracy	±1%
Working temperature	0 °C to 40 °C
Motor power	40 W
Maximum operation pressure	Tubing dependant 20 psi for SGG00000AE01 tubing set
Tubing compatibility	Only applicable for 1.6 mm wall thickness tubing

www.izon.com

2.2 Hazards

The qEV TFF is a laboratory product, however if any biohazardous samples are present then adhere to current Good Laboratory Practices (cGLPs) and comply with any local guidelines specific to your laboratory and location.

	Before running the instrument, make sure it is clean and clear of any obstructions. Check that the surrounding environment complies with operating and regulatory requirements.
WARNING	Repair of the instrument must only be carried out by an Izon-approved technician.
WARNING	Be careful of electrocution.
	High pressure. Please set an appropriate high-pressure alarm threshold based on the pressure resistance performance of the tubing.
	The use of the protective glasses and other appropriate Personal Protective Equipment (PPE) is always recommended when operating and maintaining this product.
	Hazardous chemical or biological agents. Please ensure your safety by wearing appropriate protective clothing, glasses, and gloves that are resistant to the substances used. Take care to avoid spillage. Follow local and national regulations for safe operation and maintenance of this product.
	Tubing damage may result in fluid being sprayed from pump. Use appropriate measures to protect operator and instrument.
WARNING	Izon instruments are only to be operated with Izon supplied leads and power supplies. Failure to use the correct power supply may result in invalid operation. The TFF must be installed into Earth Grounded Protected Outlets ONLY. To minimise the influence of external noise from the environment, position equipment away from electrical switching gear and interfering equipment
WARNING	Before each use, carefully observe all tubing for kinks or blockages, as this may cause tubing breakage.
	Tubing and moving parts may fail if maintenance is not performed as detailed in Section 9: Maintenance.
Ģ	The system C drive contains necessary components for running the program. Please do not delete files on the hard disk without authorisation, as this may cause failure to start. Please note that the qEV TFF File folder contains historical process data and editing it may result in data loss.
	The pressure value of the overpressure warning and protection shutdown shall be set according to the requirements, and the system should not be operated above this pressure.
Ç	Administrators should regularly check whether the system and the transitory disk are infected with viruses, and back up the data regularly.

If the height of the solution inlet is higher than the pump by more than 5 m, in order to ensure the stability of the system flow and prolong the service life of the pump, a buffer tank should be used at the inlet to reduce the pressure.

After each use of the instrument, please use a large amount of purified water to rinse, especially in the presence of high salt buffers.

Stop operation of the instrument if any of the following conditions occur:

- 1. The instrument smells of burning;
- 2. Electrical fault or damage to any cables;
- 3. The instrument is wet;
- 4. The supply voltage flashes off and the power supply is unstable;
- 5. Electrical parts damage or function failure;
- 6. The instrument has not been switched on or used for more than three months.
- 7. The instrument is in a non-compliant installation or operating environment;

If any of the above occur, please contact Izon Science Support immediately.

2.3 Unpacking

We recommend that you keep the box and packaging materials in case the instrument needs to be returned for servicing.

If you choose not to keep the materials, please recycle them wherever cardboard recycling services are provided.

Exercise caution and use proper manual handling techniques when lifting or moving the TFF as it is heavy and may cause injury if incorrectly handled.

2.4 Disposal

The TFF contains electrical materials; it should be disposed of as unsorted waste and must be collected separately, according to the European Union Directive: Waste Electrical and Electronic Equipment. The user is fully responsible for ensuring that the obsolete Equipment and/or Consumables are recycled or disposed of in accordance with this and/or any other relevant laws and regulations in the countries where the instrument is being recycled or disposed of. Contact your local Izon Science representative for more information.

3 INTRODUCTION TO THE TFF

3.1 Intended Use

The qEV TFF is a tangential flow filtration system designed for concentration, clarification, and diafiltration of biological and pharmaceutical solutions.

The system is compatible with both membrane cassettes and hollow fibre filters.

The system offers programmable functionality, allowing users to customise filtration workflows based on specific process requirements. Its software provides real-time monitoring, data logging, and visualisation to track key process parameters.

This instrument is for use by professional personnel only who are experienced in operating bioprocessing equipment and handling biological materials.

For system verification, it is recommended that cGLPs are followed to ensure reliable and reproducible results.

4 SYSTEM DESCRIPTION

4.1 System Configuration

Console

Figure 2. Back layout.

Figure 3. Scale.

The following components are required for operation and/or maintenance of the instrument but are not provided.

- tubing: 1/8" and 1/4" ID
- 3/4" gaskets
- luer connectors
- 3/4" TC connectors
- 3/4" clamps
- racks
- zip ties
- labtainers
- trays (optional)
- reducers 1/4in to 1/8in

Table 6: Filter Specifications

PROPERTY	VALUE
МЖСО	10-750 kDa, commonly 100 kDa and 300 kDa
Volume	1 L, 10 L, 20 L
Surface area	13-3700 cm ²
Flow rate	>100 mL/min at 1 bar with RO water at 25 $^\circ$ C
Compatibility	Suitable for use with SEC process and cleaning fluids

4.2 P&ID Diagram

The main part of the Piping & Instrumentation Diagram (P&ID) for the qEV TFF System is shown in Figure 4 below.

Figure 4. PI&D of the qEV TFF System.

www.izon.com

5 ASSEMBLING THE SYSTEM COMPONENT

5.1 Installation of System Hardware

- 1. Place the console and the scales on a flat, horizontal bench top.
- 2. Plug the Feed Scale connection cable into the "KMO1" port, tighten the threaded ring to prevent loosening.
- 3. Plug the Permeate Scale connection cable into the "KM02" port, tighten the threaded ring to prevent loosening.
- 4. Plug the Feed Pressure Sensor connection cable to the "Press 1" port, tighten the threaded ring to prevent loosening. Place the sensor on the sensor holder on the right side of the console.
- 5. Plug the Retentate Pressure Sensor connection cable to the "Press 2" port, tighten the threaded ring to prevent loosening. Place the sensor on the sensor holder on the right side of the console.
- 6. Plug the Permeate Pressure Sensor connection cable to the "Press 3" port, tighten the threaded ring to prevent loosening. Place the sensor on the sensor holder on the right side of the console.
- 7. Connect power cable to the console.

5.2 Installation of System Tubing

Figure 5. Tubing set (part number SGG00000AE01).

- 1. Load the Feed tubing into the pump, and connect the Feed Pressure Sensor to the Tri clamp tee. (Note: please replace the pump tubing after it has completed 10 operational cycles.)
- 2. Connect the Retentate Pressure Sensor to the Tri clamp tee on the Retentate tubing, and connect the tubings to the PCV.
- 3. Connect the Permeate Pressure Sensor to the Tri clamp tee on the Permeate tubing.
- 4. Connect the Feed tubing, the Retentate tubing and the Permeate tubing to the TFF filter.

6 EMERGENCY SHUTDOWN

The following tables describe how to perform an emergency shutdown, what happens in the event of power failure, and the procedure for restarting the system.

Table 7: Emergency Shutdow	'n
----------------------------	----

STEP	ACTION	RESULT
1	Press the EMERGENCY STOP button.	 1.The pump motor stops immediately. 2.The built-in computer and other components remain powered. 3.The curves pause, but no data is lost.
2	If required, also switch off the mains power supply using the SYSTEM POWER SWITCH, disconnect the power cord or switch off the fixed power supply circuit breaker.	 Power to the entire system, including the computer, is lost. Data and run status may be lost.

Table 8: Restart Instructions

Follow the instructions below to restart qEV TFF after emergency shutdown or power failure.

STEP	ACTION	
1	Make sure that the condition that caused the power failure or emergency stop is corrected.	
2		Reset the EMERGENCY STOP button by turning it clockwise.
3	Click Continue button in qEV TFF.	

7 SOFTWARE INSTALLATION

7.1 Reinstallation Procedure

qEV TFF software is already preinstalled on the instrument. In the event of a system re-installation, please follow the following steps to reinstall qEV TFF software. Please note, it must be installed on a Windows operating system, and Linux and Mac OS are not supported.

1. Click Setup.exe under the path of Installer \Volume and a popup window will appear. Select the installation path for qEV TFF. Then click 'Next' to continue.

8 SOFTWARE OPERATION

8.1 System Login

Turn the POWER SWITCH to the "I" position. Wait for the initialisation screen to load. The Login screen will open (Figure 24). **The default user name for the first login is 'ad' and the password is empty.** Clicking 'Login' will start the login to the system.

Figure 24. Login screen

For user creation and privilege management, refer to Users and permission management for details.

Press the PLC button to turn on the PLC.

8.2 Main Interface

The main interface consists of 3 parts, ① function control area, ② process control area, and ③ status display area, as shown in Figure 25 below.

The four operation control buttons are used to control the operating state of the system.

Figure 26. Operation control buttons

- Run: used to start a manual run or run a method;
- Pause: Pause the system control, the pump will stop, all curves are in a stopped state, and the method will be suspended;
- Continue: Resume running the control;
- Stop: The running will be stopped. At this point the data is saved as a complete document.

There are three LED lights in the middle of the function control area.

- PLC indicates whether PLC is connected correctly.
- ALARM indicates whether there are monitor signals exceeding or falling below the specified limits. If red, please check the alarm information by clicking Tools → AlarmMessage.
- The third LED light indicates the instrument status, bright green for running (RUN) or holding (HOLD), bright yellow for pausing (PAUSE), and red for stopping (STOP).

Lockout control can prevent other people from operating the controls incorrectly during a shift change or temporary absence.

Clicking the icon on the right of the function control area will lock system control, including valves, pumps, and all other operations, but the system will continue running. Click any control button at this time to bring up the User Login screen. After logging in again, the controls can be unlocked.

The Process Control Area

The process control area is used for direct control of the system's hardware such as valves, pumps, etc., as well as for observing the real-time data and status of all the sensors, etc.

Figure 28. The process control area

In the process control area, a blue path indicates actual flow paths that are currently available for flow, and grey indicates flow paths that are currently blocked.

The buttons are described in Table 10 below.

Table 10: Process Control Buttons

ICON	COLOUR	FUNCTION
Pump	Green: ON Gray: OFF	Click to set flow rate. Only applicable under manual mode.
Weight1	Green: Online Red: Disconnected	Click to tare or zero scale reading.
Weight2	Green: Online Red: Disconnected	Click to tare or zero scale reading.
PCV	Yellow	Click to adjust the opening % of the Pressure Control Valve. Only applicable under manual mode.

The Status Display Area

There are two tabs in the status display area, the Curve tab, and the Log tab. Click the corresponding text button to switch.

- 1. The Curve tab is used to display all collected signal values and calculated data in real time, and for curve setting. Refer to Real-time curve operation for details.
- 2. The Log tab is used to view all operation and alarm information.

System logs are recorded in absolute time. In addition to recording the timestamp, each log also records the current user, event type, event, relative time of occurrence, and accumulated volume, as shown in Figure 29.

time	user	type	event	reference point
2024/12/25 13:57:48	ad	RunStatus	Stop Run	t=0.08 (min), Vol=0.01 (L)
2024/12/25 13:57:43	ad	PCV	TMP (1.00 psi)	t=0.00 {min}, Vol=0.00 {L}
2024/12/25 13:57:43	ad	Pump	Flow (100.00 mL/min)	t=0.00 {min}, Vol=0.00 {L}
2024/12/25 13:57:43	ad	RunStatus	Start Run	t=0.00 (min), Vol=0.00 (L)

Figure 29. System logs

Logs are used for traceability. Logs and curve data are saved to the acquisition file in real time. When historical data is loaded, corresponding logs can also be retrieved. Logs are stored in encrypted mode. Users cannot modify or delete a log.

8.3 Users and Permission Management

Only an administrator can assign users to different permission groups, which defines the functions that the user is permitted to use.

Permission Group Description

The system has 5 permission groups: Administrator, Engineer, Power User, Operator and Guest. Click Access → User Setup → Group Manage... to open the Group Manager screen.

🔶 Group	Manager			×
	Groups Administrator Engineer Power User Operator Guest	Access Solution Solution Add Support Support Au Exit	Permissions If Manage tem Setting Isor Calibrate tory Data 1 Control vanced Setting per Setting nature dit Trail t Software	
		ОК	Cancel	

Figure 30. Group manager screen

Each permission is described in Table 11 below.

Table	11: P	Permi	ssions
-------	-------	-------	--------

PERMISSION	DESCRIPTION
User Manage	Whether the user can access Access → User Setup ONLY administrators have this permission.
System Setting	Whether the user can access Parameters \rightarrow Settings
Sensor Calibrate	Whether the user can access Parameters → Calibrate
History Data	Whether the user can access Tools → History
Run Control	Whether the user can access 4 operation control buttons
Advanced Setting	Users with this permission can view the Advanced settings tab and set up parameters.
Super Setting	Users with this permission can view the Super settings tab and set up parameters.
Signature	Users with this permission can sign off on the data.
Audit Trail	Whether the user can access Access → Audit Trail
Exit Software	Whether the user can exit qEV TFF software.

After clicking Access \rightarrow Change User to re-login to the system, the changed permissions will take effect immediately.

User Management

Click Access \rightarrow User Setup to pop up the User Manager screen. If users don't have the User Manage permission, Access \rightarrow User Setup is displayed in grey and cannot be accessed.

Group	Manage			
Users				
Name	Full Name	Position	Group	
ad	default	Zenco	Administrator	
				New
				Edit
				Disable

Figure 31. User Management screen

Users can be added, modified, or deleted on this screen.

When adding a user, enter Username, Full Name, Position, and select permission Group. Administrators can also modify permission groups for the listed users by clicking Edit.

The default password of the new added user is empty, that is, new users do not need to enter the password during login. However, it is strongly recommended that new users click Access → Change Login Password and Access → Change Signature Password to change the login password and the signature password after their first login.

When deleting users, ensure that there is always an Administrator group user in the users list. If all Administrator users are deleted, you will no longer be able to perform user management.

When adding or modifying users, do not use special characters, such as: $/ : *? " \leftrightarrow |$ Enter key and other characters in the username.

8.4 Parameter Settings

Click Parameters → Settings to pop up the Parameters Settings screen, including three tabs, the Basic settings tab, the Advanced settings tab and the Super settings tab.

Basic Settings

Basic Settings is used to specify the alarms for the pressure limits. The setting value should be no more than the SetPreMax set on the Super settings tab.

Ensure you set Pressure upper limits.

Basic settings	Advanced settings	Super settings	
Enable alarm whe	n Feed Pressure is over upper limit?	Max 20 psi	
Enable alarm whe	n Feed Pressure is below lower limit?	Min 2 psi	
S Enable alarm whe	n Retentate Pressure is over upper limit?	Max 20 psi	-
Enable alarm whe	n Permeate Pressure is over upper limit?	Max 5 psi	-
S Enable alarm whe	n TMP is over upper limit?	Max 15 psi	
C Enable alarm whe	n Feed weight is below lower limit?	Min 1 Kg	-

Figure 32. Basic settings tab

An Alarm information box will be displayed on the screen if the monitored values exceed or fall below specified limits, and the alarm will be recorded in the log. The system will be paused.

Advanced Settings

Access to the Advanced settings tab depends on whether a user has the 'Advanced Setting' permission.

Basic settings	Advanced settings	Super s	ettings
	Pu	mp Parameters	
Enable soft keyboa	ırd	Tubing Size (ID*OD)	
		17# (6.4mm*9.6mm)	~
Instrument ID		Full Speed (mL/min)	
		760	
		Setting	
		secury	

Figure 33. Advanced settings tab

In the Advanced settings tab, users can modify the following internal system parameters:

- Enable soft keyboard: Enable soft keyboard;
- Instrument ID: Set the ID of the instrument;
- Tubing Size: Select tubing size;
- Full speed: Set the flow rate under 100% speed of the pump. For SGG00000AE01 tubing set, the full speed is 1724 mL/min; For other tubing, please click the Setting button to open the screen as below and follow the steps to set full speed.

	Run					
. Whe	en the tubing s than 5 minu	is full of utes), click	water an Timer b	d no bubbles outton and re	are observed cord the initia	, enter the testing time al weight or volume.

Figure 34. Speed setting screen

Super Settings

Access to the Super settings tab depends on whether a user has the 'Super Setting' permission.

Basic settings	Advanced settings	Supersettings	
COM Set (PLC COM	The setting COM is effective after re	estarting the software)	
Pressure Senso 4mA-Pressure 0	r Set 20mA-Pressure psi 43.54 psi		
Other Parame LockTimeout 30	set MaxPressure min 20 psi		

Figure 35. Super settings tab

Ensure Set_MaxPressure <= 20psi

Table 12: Super setting permissions

PERMISSION	DESCRIPTION
PLC COM	Set up COM address of the instrument. The above figure shows the default COM settings.
4mA_Pressure	The pressure corresponding to the minimum current of the pressure sensor.
20mA_Pressure	The pressure corresponding to the maximum current of the pressure sensor. For SGE-801A-3BAR, it should be set as 43.54 psi (3 bar).
LockTimeout	Set the screen interval, the default setting is 30 minutes.
Set_MaxPressure	The maximum value of settable alarm pressure

8.5 Start a Run

Please set the correct full speed and tubing size prior to initiating a manual run. Refer to Advanced settings for details.

Please ensure that the necessary pressures alarms are activated prior to initiating a manual run. Refer to Basic settings for details.

Manual Run

<u>/!</u>

Click the button 🛛 🖒 Run

to open Run Confirmation screen.

Table 13: Manual Run Process

STEP	ACTION	FUNCTION					
1	Click the Manual Run checkbox	Run Confirmation Run Mode Manual Run Concentration Diafiltration Flushing Cleaning Normalized Water Permeability Save Data? Batch Name Browse File Name untitled001 Start Run Cancel Run					
2	[Optional] Click the Save Data checkbox, and select the path of data saving by clicking Browse, then type the file name in the Daq Name field	The data saving step can be skipped if desired. The data will be temporarily stored in the Temp folder.					

3	[Optional] Click the Add absolute time identifier checkbox	To avoid the occurrence of file duplication or overwriting. A suffix of absolute time will be automatically added to the end of each file name, such as demo _ Run 1 (20150116112233). tdms						
4	Click Start Run to open Manual screen	Manual Mode Target Value Pump Flow 1700 DeltaP 5 psi PCV Fixed 100 % 7MP 10 psi OK Cancel						
5	Select the control mode of Pump	Flow mode: The pump speed will be automatically adjusted to reach the target flow rate. Please refer to filter manufacturer for the recommended flow rate. DeltaP mode: The pump speed will be automatically adjusted to maintain 90 - 110% of the target DeltaP.						
6	Select the control mode of PCV	Fixed mode: Set the fixed opening % of the PCV. Less than 10% is the effective opening %. TMP mode: The opening % of the PCV will be automatically adjusted to maintain 95 - 105% of the target TMP.						
7	Click OK	Start a manual run.						

Once started, the pump icon in the process control area turns green, indicating that the pump has started.

Check for leaks at all the connections. If any leaks are detected, please tighten the relevant connectors. If leaks continue to be detected, please contact Izon Support for further guidance.

If the flow path is blocked, or the pump speed is set to 0 mL/min, the colour of the pump icon is grey, indicating that the pump is not turned on, while the system is under running, and the curves and operations have begun to be recorded.

Concentration Run

Click the button 🕞 Run

to open Run Confirmation screen.

			OK Cancel

5	Select the control mode of Pump	Flow mode: The pump speed will be automatically adjusted to reach the target flow rate. Please refer to filter manufacturer for the recommended flow rate. DeltaP mode: The pump speed will be automatically adjusted to maintain 90 - 110% of the target DeltaP.
6	Type the membrane area of the filter	
7	Select the control mode of PCV	Fixed mode: Set the fixed opening % of the PCV. Less than 10% is the effective opening %. TMP mode: The opening % of the PCV will be automatically adjusted to maintain 95 - 105% the target TMP.
8	Type the target duration as the End point	When the set conditions are met, the system will automatically start timing and stop the program when the set duration is reached.
9	Click OK	Start NWP

8.6 Real-time Curve Operation

Curve Setting

The real-time curve is used to present the data measured by each sensor in the form of a real-time plot. Click the curve name on the right of the status display area, the Y-axis scale changes to the unit applicable for the selected curve.

Figure 36. The Y-Axis Setting

Click 'Curve' to open Curve Settings screen. There are three tabs in the screen for setting the curve display, Y-axis scale, and X-axis signal.

1. The Curves tab

On this tab, users can select which curves to be displayed in the plot by clicking the checkbox in front of the signal name, and select the desired style and colour through the drop-down list.

😻 UI Plot.lv	/lib:Curve Set	tings.vi		×
Curves	Y-Axis X-A	xis		
0	PFeed PPermeate			
•	PRetentate TMP		Select All	
•	Opening Weight1		Clear All	
•	Weight2 Flow			
0	NWP			
			OK Cancel	

Figure 37. The Curves tab

2. The Y-Axis tab

This tab is used to set the Y-axis scale for different curves. There are two modes of Y-axis scale, Auto Scale and Fixed Scale. Auto mode means that the scale of the curve will be adjusted according to the size of the signal in order to present the whole curve in the plot. Fixed mode indicates that the curve has a fixed scale range. This mode is used to observe details within a certain range of the curve.

😻 UI Plot.lvlib:Curve Se	ttings.vi				×

			ОК	Cancel	

Figure 38. The Y-Axis tab

3. The X-Axis tab

This tab is used to select base unit and set the scale of the X-axis. There are three modes of X-axis scale, Total, Zoom and Window modes. Total mode displays all data from the start of the run in the plot; Zoom mode allows the plot to be zoomed in and out arbitrarily; Window mode displays a fixed x-axis length.

🚸 Ul Plot.lvlib	:Curve Settings.vi			×

Nu	Imber of records	Query Prev Page Next Page

Figure 42. Audit Trail screen

Audit trails are used to view all system activities, such as logins, run logs, and data information. Once qEV TFF is started, the actions are captured into the database in a sequential manner using absolute time stamps. Thus, if system time is changed, data is modified, or even a file is deleted, it can be traced back through the Audit Trail function.

Users can set the number of records per page. Click 'Query' to go to the last page. Click 'Export to CSV' to export the filtered records as a CSV file to a user-specified folder.

8.9 Historical Data

View Historical Data

All data are saved on the system disk. Click Tools → History to open the historical data screen. Click 'Select Daq File' on the Basic Message tab to select the data file to be viewed or exported. On the tab, users can view the basic information, such as start time, end time, flow rate of the pump and other records of the system running

After generating a report, click 'Preview PDF Report' to display the report on the left side.

8.10 Calibration

Scale Calibration

Click Parameters \rightarrow Calibrate to open the Sensor Calibration screen, and select the scale to be calibrated in the top right corner. Calibrate the scales following the instructions on the screen, as shown below (Figure 49).

ensor Calibration	1
Feed Scale Measure Value 0 Kg	Select Sensor Feed Scale
1. Ensure that the scale is placed steadily;	
2. Click "Zero" to calibrate the zero, then the measure value is $0^{\prime}_{\rm r}$	
Zero	
3. Wait for 15 seconds before proceeding to the next step;	
4. Place a weight not exceeding 20kg in the center of the scale platform;	Close
5. Please wait for 10 seconds before proceeding to the next step;	
6. Enter the weight of the weight and click "Calibrate", then the measure value is the weight;	
Weight 0 Kg Calibrate	
7. Take away the weight, calibration is complete.	

Figure 49. Scale calculation

Reset PCV

Click Parameters \rightarrow Calibrate to open the Sensor Calibration screen, select pressure control value on the top right corner, and then reset the PCV based on the following instructions (Figure 50).

. Click Reset Zero, reset pressure control valve to zero; 2. When hearing the sound of valve, and click "Stop";	Reset Zero	Select Sensor Pressure Contro
I. End the reset pressure control valve to zero.		
. Click Reset 100%, reset pressure control valve to zero;		Close
. When hearing the sound of valve, and click "Stop";	Reset 100%	
. End the reset pressure control valve to 100%.		

Figure 50. Reset PCV

8.11 Exit Procedure

Click 'Exit' on the menu bar, a screen will pop up to confirm exit from qEV TFF if the user has permission.

If the user does not have the permission to exit qEV TFF, the Exit menu will be grey. In this case, the user can click 'Close' on the menu bar and a screen will pop up to confirm shut down of the computer.

9 MAINTENANCE

9.1 Daily Maintenance (before/after each use)

- 1. Clean and wipe the exterior surface of the instrument.
- 2. Check pump tubing, PCV seals, and sensor connections for leaks or wear.
- 3. The flexible tubing provided with the TFF system requires regular replacement. The tubing is exposed to wear and friction in the peristaltic feed pump and high pressure from the feed pump. Before operating the system, inspect the tubing to ensure the following:
 - Tubing sections are installed at the correct locations.
 - All fittings are properly installed and locked.
 - Tubing sections and connections are free of visual damages, leaks and wearing.
 - Tubing is not kinked.
- 4. Replace the pump tubing after it has completed 10 operational cycles.

9.2 Quarterly Maintenance

- 1. Inspect for leaks in valve, connections and pump.
- 2. Check condition of gaskets.
- 3. Replace the seals of the PCV.

9.3 Semi-Annual Maintenance

- 1. Dismantle and clean all fittings.
- 2. Verify that all safety elements are not damaged and are working properly.
- 3. Inspect the pump.

9.4 Annual Maintenance

- 1. Visual inspection of corrosion, and material degradation in all components.
- 2. Verify tightening of the main connections of the console.

10 TROUBLESHOOTING

Troubleshooting

SYMPTOM	REMEDY
Touch screen does not work	Restart the system
Reading deviation between the pressure sensor and the other calibrated pressure meter is over 0.25%.	Replace the pressure sensor

If you are unable to solve the problem, please contact Izon Science Support.

11 PARTS AND ACCESSORIES

Replacement parts

DESCRIPTION	PART NUMBER
PCV	SGE-PCV-17#
Pressure sensor, 3 bar	SGE-801A-3BAR
Scale, 20kg	SGE-KM01-20KG
Pump head	SGE-PUMP-600RMP
Tubing set	SGG00000AE01

Annual maintenance parts

DESCRIPTION	NUMBER
PCV seal	12 (3 for each quarter)

Additional support material is available at support.izon.com

If you have any questions that are not answered on the support portal, or your instrument requires repairs/ maintenance, please contact our support staff via the online support portal by raising a support ticket.

When reporting qEV TFF issues to Izon support, please provide the serial number, which can be found on the rear of the TFF as in Figure 53.

Figure 53. The TFF serial number and compliance sticker.
